

Good Site Practice Guide

INTRODUCTION

We treat the health and safety of our staff and site personnel with the utmost importance.

This Good Site Practice Guide is intended to highlight the requirements we have for delivering to your site safely as well as showing some examples of bad practice that should be avoided.

Good site practice will benefit not only our staff but will ensure silo operators have a safe environment in which to operate.

ENSURE ONLY TRAINED PERSONNEL USE THE SILO

You have a responsibility to ensure that your staff are trained on the safe use of any equipment you give them to use. CPI Service Technicians carry out free training on the safe use, maintenance and cleaning regimes that need to be followed to ensure trouble free mortar outputs.

Trained operators are issued with the following cards:

Refresher training or training for a new operative can be arranged **free of charge** by contacting your supply plant.

LOCATING THE SILO

Each silo requires a firm level base measuring 3m x 3m and clear access should be allowed for the delivery vehicle to reverse onto this position; remember to avoid overhead cables when choosing your silo location.

Also bear in mind that the silo will need collecting via the same route at the end of the job.

DON'T

Silo will not be able to be collected in this position, silos need to be located on firm level base.

ENSURE CLEAR ACCESS FOR DELIVERY VEHICLES

Delivery tankers must be able to reverse up within 3m of the silo to carry out the refill operation.

DO

DON'T

Delivery tanker will be unable to access the silo.

ENSURE SAFE, CLEAR PEDESTRIAN ACCESS FOR DRIVERS AND SILO OPERATORS

Slips, trips and falls are a major cause of injuries across the industry. Access to the silo for our drivers and site operative should be level and clear of obstacles.

DON'T

Multiple trip hazards for silo operators and delivery drivers.

MAINTAIN CLEAR LINE OF SIGHT FROM TRUCK CONTROLS TO THE SILO

Our drivers must have a clear line of sight from the vehicle controls to the silos themselves when filling to ensure they can shut down the blow in the event of any emergency.

DO

DON'T

Drivers need clear line of site to the silo whilst operating the pressure tanker.

SILO BARRIERS

Some customers like to install vehicle barriers in front of the silo to avoid vehicle damage to the silos themselves.

Remember these barriers must still allow safe pedestrian access to the silo and avoid the need for any operatives to climb over them.
